Profile

My research focus. I am a linguist working at the intersection of linguistic typology, pragmatics, interaction and corpus linguistics. I study how the grammars of the world's languages take shape in use, and how the need to understand one another influences the ways speakers build categories, connect ideas, negotiate knowledge and expectations, and make meaning together.

Languages, discourse and interaction. I move between broad cross-linguistic comparison and the fine-grained analysis of naturally occurring interaction, treating linguistic diversity as a source of theoretical insight rather than as variation to be reduced to predetermined models. I investigate how recurrent communicative practices become constructions, how meanings develop across time, and how typological generalizations can remain sensitive to speakers, contexts and genres.

Resources and intellectual approach. This perspective also guides the linguistic resources I create. As founder and co-coordinator of the KIParla corpus, I develop corpora as modular, incremental and reusable research infrastructures that grow through collaboration and can respond to questions not fully anticipated at the outset. Across my work—from coordination and logical connectives to ad hoc categorization, co-construction, reference and spoken-language variation—I follow paths that emerge from the data: rigorous in method, but open to unexpected connections across languages, disciplines and communities.
